

Case Study

Industrial Energy Efficiency

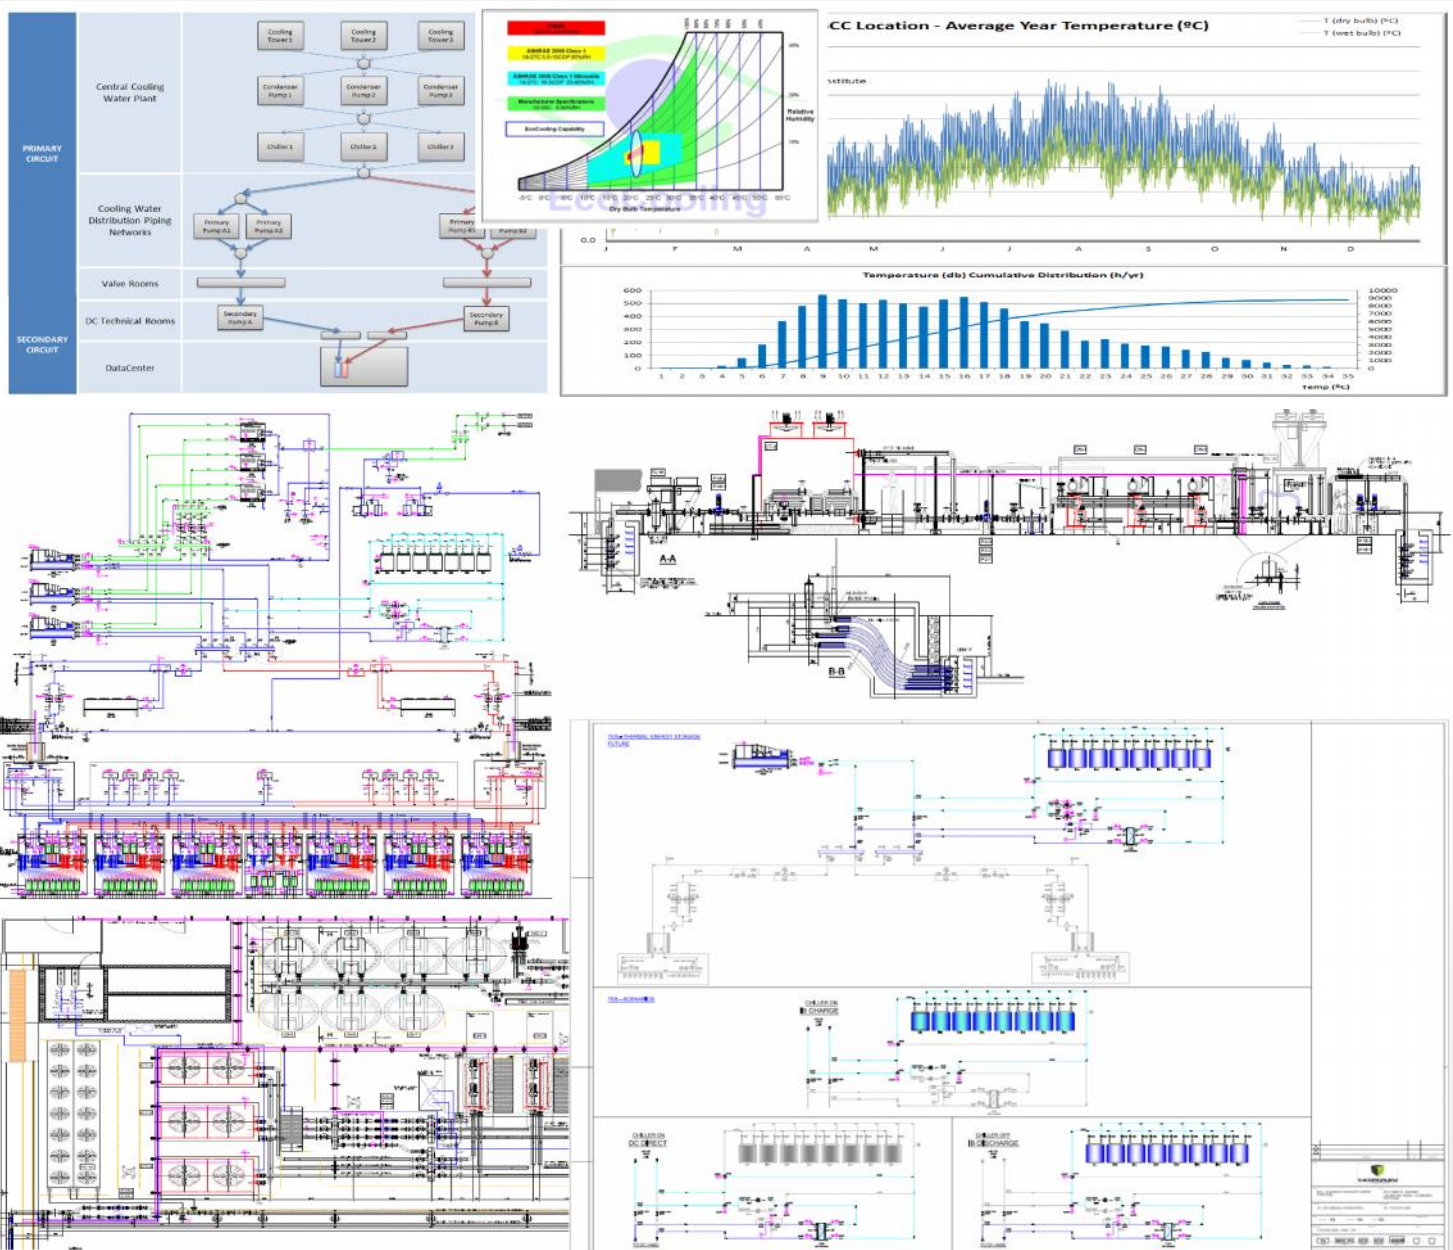

Sector: <input checked="" type="checkbox"/> Industry	<input type="checkbox"/> Large Buildings	<input type="checkbox"/> Infraestruturas	<input type="checkbox"/> Small buildings / residential
Subsector: Data Centers			Ano: 2012
Client: Avepark - T4 BCC Business Continuity Center			Implementação (meses): N/A
Location: Guimarães, Portugal			Contrato Desempenho (anos): N/A
Type of Contract:	Services - Preliminary and Detail Design - High Efficiency Coling System for a 500kW Data Center (Tier 4, Uptime Institute)		

Project description:

A EWEN designed the cooling system for a new Data Center (IT Power 500kW), for Avepark (Guimarães, Northern Portugal). The Data Center was designed according to the stringent demands of the Uptime Institute, to achieve Tier 4 level (only DC in Portugal designed for Tier 4).

Designed for high energy efficiency, as well as a very high redundancy level for all the critical systems. The system also included a ice-based TES (Thermal Energy Storage) System , for "Peak Shaving" and as thermal energy reserve.

Modelo: MP071_v03_CS010
